Niagara Networks Products Proudly Made in the USA

Niagara Networks is one of the few companies to make network visibility products in the USA.

Niagara Networks develops, manufactures, tests, and ships products from their ISO 9001 facility in California. Manufacturing in the US provides Niagara Networks' customers with a tremendous advantage.

We recognize that our networking equipment is deployed in critical parts of an organization's network. Sitting in the path of strategic and highly sensitive traffic, Niagara Networks and Niagara Networks products serve in a trusted role.

Because we fully control the manufacturing process, Niagara Networks can ensure both quality and security through the implementation and adherence to strict standards. Every component is sourced from certified suppliers in the United States, leave no room for low quality substitues. Every product goes through a rigorous, 72 hour live burn-in test to ensure its sustainability and performance.

Components and their assembly are of the highest quality standards, with full visibility and accountability to on-sitemanagement.
Niagara Networks performs the entire manufacturing process under its sister company, Interface Masters Technologies. In addition, Niagara Networks maintains an exceptional level of time-to-market, enabling us to be more responsive to market trends and customer needs, specifically, in government agencies that require purpose build or specialized network visibility solutions.

Our products are trusted by some of the largest service providers in the world, financial institutions, government agencies, and leading network security manufacturers for important and sensitive needs, where security and reliability have to be above and beyond.

Our customers and partners engage with Niagara Networks as a trusted partner. You can too.

ABOUT NIAGARA NETWORKS

Niagara Networks is a Silicon Valley-based company that pioneers the Open Visibility Platform™ to bring desperately needed agility to network security. Niagara Networks provides high-performance, high-reliability network visibility, and traffic delivery solutions for the world's most demanding service provider and enterprise environments.

Our solutions are installed in the world's most prominent networks, empowering Security and Network Operations Centers (SOC/NOC) with end-to-end visibility and actionable traffic intelligence across physical and virtual cloud networks.

As a former division of Interface Masters, Niagara Networks provides all the building blocks for an advanced Visibility Adaptation Layer at all data rates up to 100Gb, including advanced packet brokers, bypass switches, network TAPs, and unified management and orchestration software that serves as a single pane of glass to ease configuration and provisioning of the visibility infrastructure.

We Design, Develop and Manufacture our Products in the Silicon Valley, USA.
